The following minimum guidelines are intended to assist in establishing insurance requirements for construction contracts awarded to contractors or facility-related consultants. Each contract is different or may have unique circumstances and it’s important that consideration be given to the identification and analysis of risks associated therewith. The purpose of these guidelines are to provide a basis for the process and should NOT be construed as a “one-size-fits-all”. Consult with Campus Risk Management for further advice as needed.

While granting exceptions to the requirements are not recommended, if an exception is warranted, Campus Risk Management and/or Construction Counsel should be consulted prior to granting the exception.

The time period for coverage to be maintained may vary by coverage type and is specified in the core agreement.

Consult Campus Risk Management before establishing limits for:

1. All HIGH RISK construction projects (see chart below for examples), and;

2. Projects having unique exposures (working in and around non-University-owned utilities, existing or potential environmental risks, significantly high-valued ($) and/or specialized equipment, etc.).
**RISK CATEGORIES**

The following list provides a general framework (where the project scope may include, but not only limited to these activities) as to severity categories and is not meant to address all activities/risks that may exist with your project.
